[Problem](#)[Submissions](#)[Leaderboard](#)[Editorial](#)[Tutorial](#)

Given the names and grades for each student in a class of  $N$  students, store them in a nested list and print the name(s) of any student(s) having the second lowest grade.

**Note:** If there are multiple students with the second lowest grade, order their names alphabetically and print each name on a new line.

### Example

```
records = [["chi", 20.0], ["beta", 50.0], ["alpha", 50.0]]
```

The ordered list of scores is `[20.0, 50.0]`, so the second lowest score is `50.0`. There are two students with that score: `["beta", "alpha"]`. Ordered alphabetically, the names are printed as:

```
alpha
beta
```

### Input Format

The first line contains an integer,  $N$ , the number of students.

The  $2N$  subsequent lines describe each student over  $2$  lines.

- The first line contains a student's name.
- The second line contains their grade.

### Constraints

- $2 \leq N \leq 5$
- There will always be one or more students having the second lowest grade.

### Output Format

Print the name(s) of any student(s) having the second lowest grade in. If there are multiple students, order their names alphabetically and print each one on a new line.

### Sample Input 0

```
5
Harry
37.21
Berry
37.21
Tina
```

```
37.2
Akriti
41
Harsh
39
```

### Sample Output 0

```
Berry
Harry
```

### Explanation 0

There are **5** students in this class whose names and grades are assembled to build the following list:

```
python students = [['Harry', 37.21], ['Berry', 37.21], ['Tina', 37.2], ['Akriti', 41], ['Harsh', 39]]
```

The lowest grade of **37.2** belongs to Tina. The second lowest grade of **37.21** belongs to both Harry and Berry, so we order their names alphabetically and print each name on a new line.

Language

Python 3

```
1  if __name__ == '__main__':
2      students_grade=[]
3      for _ in range(int(input())):
4          name = input()
5          score = float(input())
6          students_grade.append([name, score])
7      sorted_scores = sorted(list(set([x[1] for x in students_grade])))
8
9      #fetching 2nd_lowest_score from unique_sorted_scores
10     second_lowest = sorted_scores[1]
11
12     low_final_list=[]
13     for student in students_grade:
14         # checking 2nd_lowest_score to each student[score]
15         if second_lowest == student[1]:
16             low_final_list.append(student[0])
17
18     for student in sorted(low_final_list):
19         print(student)
20
```
